

PEST & DISEASE
ADVICE

SCALE

Scale are insects that suck sap from plants and excrete a sticky 'honeydew' substance that then accumulates on the foliage attracting ants and other insects.

Scale insects do not look like typical insects and are difficult to recognize as they form protective shells, completely covering themselves, making them hard to see and control.

Scale can cause branch die-back and eventual death to the plant if not controlled using a broad spectrum insecticide such as Conguard.
